Repair Work

Devil's Slide (post mile 39.14)

- Work continued around the clock Saturday, Sunday and Monday (Memorial Day) to drill and install rock dowels.
- After the rock dowels are installed, shotcrete is applied to cover any exposed surface and to fill cracks resulting from slide movement. This work started over the weekend.
- Also over the weekend, one of the drilling contractors, Condon and Johnson, started to drill and install 150 feet long tie backs. This work started on the northern portion of the first whaler wall below the road (wall A). At the end of the holiday weekend, the first three tie backs were installed.
